### **Problem 2.1 (Gram-Schmidt algorithm)**

In this problem we use the notation  $Proj_S(x)$  to denote the projection of a vector  $x$  onto some set  $S$ , which consists of vectors that are of same dimension as  $x$ . Consider the following vectors and subspaces.

In this problem we use the notation  $Proj_S(x)$  to denote the projection of a vector  $x$  onto some set  $S$ , which consists of vectors that are of same dimension as  $x$ . Consider the following vectors and subspaces.
